

GBFS Audit Catalogue

A reproducible audit of 1,509 open bike-sharing feeds across 48 countries

Raw input · transport.data.gouv.fr + MobilityData global catalogue

1,509 GBFS systems · 48 countries · ~67,000 FR stations · no semantic audit

Seven anomaly classes (A1-A7) — unified taxonomy

A1 Out-of-domain	A2 Placeholder	A3 Over-capacity	A4 Geospatial	A5 Perimeter	A6 Zero-capacity	A7 Null-capacity
carsharing as BSS	constant c all stations	conditional avg free-float	transposed >3 σ outliers	overseas; rural >50,000 km ²	c = 0 on physical docks	c = NaN on ≥50% stations
46 sys.	48 sys.	33 sys.	81 sys.	17 sys.	14 sys.	215 sys.

Six-step purging pipeline — idempotent · reversible · logged

Multi-source hybridisation — spatial joins · administrative aggregation

INSEE Filosophi Income, Gini	BAAC Cerema Crash density	BD TOPO Cycle linear	Open StreetMap Facilities	FUB Barometer Perception

GBFS Audit Catalogue v1.0

DOI 10.5281/zenodo.20125460 · ODbL · 46 typed columns · Croissant + DCAT-AP

46,307 certified stations	123 audited systems	97 cities covered	46 typed columns	30.9 % raw stations reclassified
--	----------------------------------	--------------------------------	-------------------------------	---

Headline result

Bordeaux — one A3 fix

9,921 raw entries → 225
dock-based stations

National rank
2 → 14

Syntactic standardisation is necessary but not sufficient.

An open mobility feed is a starting point for research, not a substitute for one.
